EPM Welcomes Mark Anderson!

EPM is pleased to welcome Mr. Mark Anderson to their Fire Protection Engineering team. Prior to joining EPM, Mr. Anderson was the site Fire Protection Engineer at the Vermont Yankee Nuclear Power Station. In that role, he was responsible for overall ownership and implementation of activities necessary to maintain the effectiveness and technical accuracy of the Fire Protection Program at the site, which included compliance with federal, state, and insurance requirements. As Vermont Yankee transitioned from an operating generating plant to a decommissioned facility, Mark worked with the Vermont Yankee Decommissioning Team to change fire protection related licensing basis documentation and procedures; reduce combustibles; and abandon former fire protection systems as the hazards were removed, ultimately to prepare the facility for SAFSTOR. Mr. Anderson joins EPM's Fire Protection Engineering Division as a Consulting Engineer.
